

IMPRINT®

Ennis Prismo
TRAFFIC SAFETY SOLUTIONS

The Complete Alternative To Block Paving

Block paving or cobbles can provide an attractive finish to a range of surfaces. They are however time consuming, labour intensive and costly, compared with other surface treatments. However with Imprint®, Ennis Prismo's patented surface treatment, the same effects can be achieved at a lower cost and in a fraction of the time.

Imprint® is a revolutionary road surfacing treatment that can deliver the strong aesthetic appeal of block paving or cobbles, but without the limitations of the traditional approach. Imprint® is virtually maintenance free, removing the issue of plant infestation between blocks, as well as removing design limitations, potential trip hazards and damage claims.

IMPRINT®

The complete alternative to block paving

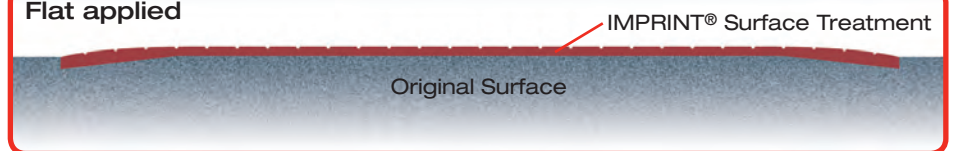

Imprint® is a hot applied resin based compound, which when hot, is imprinted by a mould to create the pattern chosen by the specifier. Imprint®, laid 15mm thick, can be applied to existing surfaces and with a curing time of less than one hour, means minimal traffic disruption.

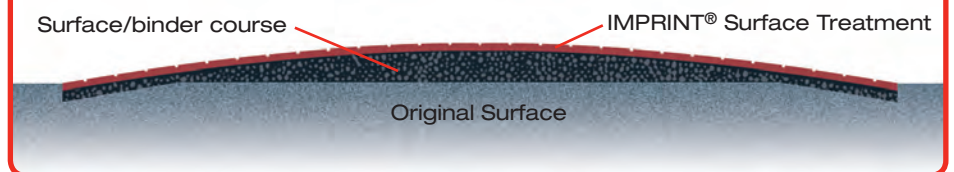

Imprint® provides the aesthetic appeal of block paving whilst being far more durable. The product is available in a range of colours and patterns, and is virtually maintenance free.

Flat applied

Applied to raised profile

IMPRINT® benefits:

- A synthetic surface that is an aesthetic alternative to block paving
- Removes issues of ongoing maintenance, design limitations and trip hazards
- An application that can be applied to existing surfaces
- Quick installation
- Sets in 1 hour, allowing for quick opening to traffic
- Available in many colours and patterns
- Colour is throughout the product and therefore fade resistant
- Reinstatements retain integrity and uniformity
- Skid resistant
- Can be applied all year round
- Proven track record in high trafficked areas
- Resistant to rutting - conforms to BS 594 and BS EN 13108
- Eliminates weed and vegetation growth

Up to 40% more cost effective than traditional block paving techniques

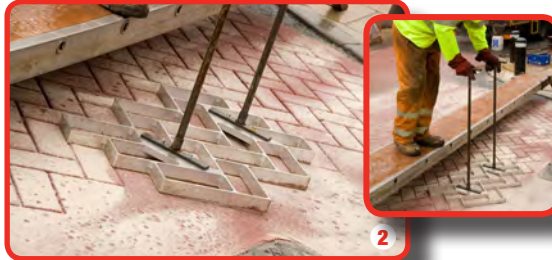

Ennis Prismo

TRAFFIC SAFETY SOLUTIONS

IMPRINT® Laying Process

Hot Imprint material is spread evenly over the surface

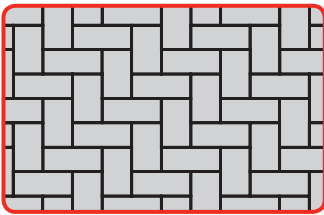

Sand is broadcast over the material to stop the stamp tool sticking while the pattern is imprinted

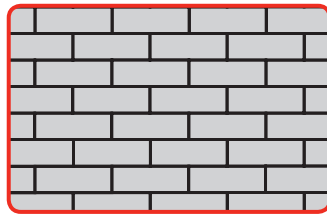

After approximately 1 hour, the surface is set, excess sand is brushed off and the area can be opened to traffic

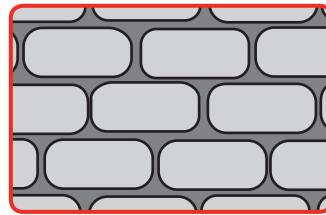

IMPRINT® Patterns Available

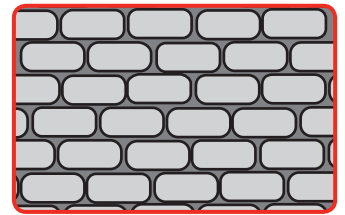

Herringbone

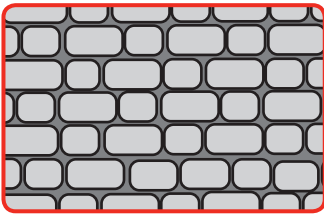

Brick

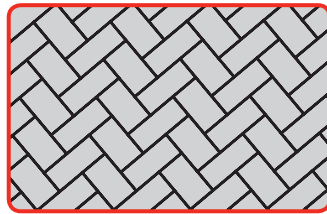

Large Cobble

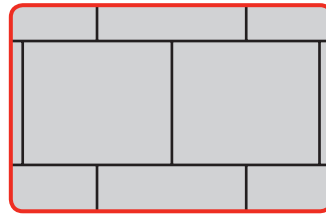

Cobblestone

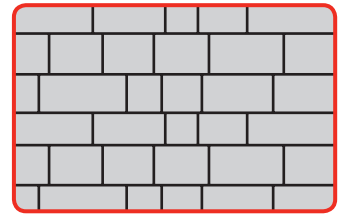

Granite Sett

45° Herringbone

Paving Slab

Tegula

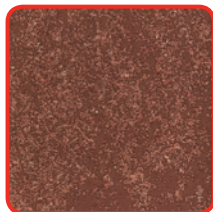

IMPRINT® Colours Available*

Ennis Prismo Red

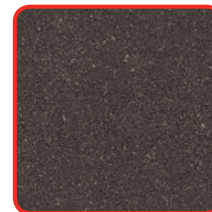

Oxide Red

Burnt Red

Charlwood Grey

Dark Grey

Light Yellow

Brown

Fawn

Stone (Buff)

Bristol White

Light Grey

Green

* Colours may vary slightly to those shown

Company Overview

Ennis Prismo Traffic Safety Solutions is the global market leading manufacturer, contractor and supplier of road markings, surfacings and traffic safety products.

Formerly known as Prismo Road Markings Limited, the company is now part of Ennis Traffic Safety Solutions - the world leader in road safety products.

Ennis Traffic Safety Solutions dominates the Americas markets, as well as supplying in to Asia Pacific, while Ennis Prismo has built an equally strong position across Europe, the Middle East and Africa.

As a result, we are able to offer a truly global service that we believe is unrivalled in the road safety industry. Our areas of expertise include:

- **Road markings**
- **Road studs**
- **Surface safety solutions**
- **High friction surfacing**
- **Coloured and decorative surfacing**
- **Bridge expansion joints**
- **Sealing and crack repair systems**
- **Road marking performance analysis**
- **Contracting services**
- **Traffic products**

Our multinational sales, logistics and manufacturing operations, combined with our extensive product range and over 100 years experience, mean that Ennis Prismo Traffic Safety Solutions is uniquely placed to meet your road safety requirements.
